TRAFFIC MANAGEMENT SYSTEM

PHASE-3 Project using WOKWI simulator.

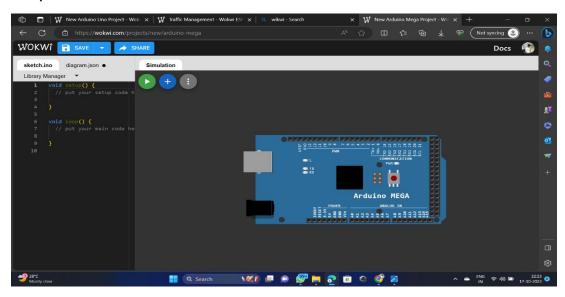

The smart Traffic management system is implemented by using the simulator WOKWI simulator.

This simulation is designed for a two-sides traffic road.

Step1:

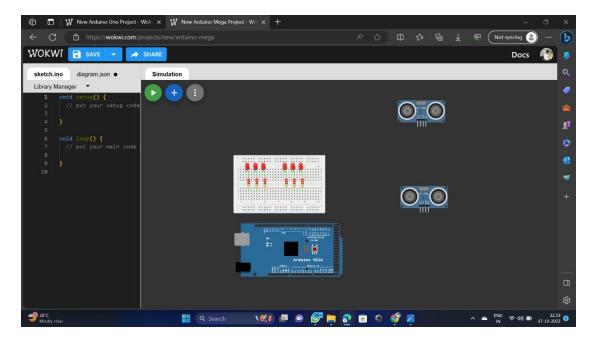

- o Start the WOKWI simulator. (https://wokwi.com/).
- Log in to the side to create a new project, by clicking the "Create a New Project".

Step2:

On the simulation area place an "ARDUINO MEGA" as controller of our system

Step3:

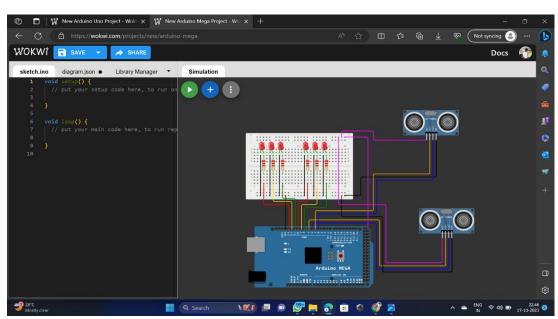

In step3 place the components required for the system from the component provider.

The required components are used in this system are:

- Bread board
- Ultra sonic sensors (HC-SR04)
- Resistors
- LED's

Step4:

In step4, connections are completed according to the components requirements and our convinences.

Aurdunio mega pin connections:

- The LED to digital pin 2 and 3 will be the traffic lights of main road.
- The LED to digital pin 4 and 5 will be the traffic lights of side road.
- The uktra sonic sensor s connected to the pins of 5.2 v input terminal, ground pins to GND, the trx and rx are connected to the pins of 4,5,6,7 pins.
- The resistors are connected to the LED's positive terminal and the negative terminalas are connected to the GND pin with help of bread board.

Step5:

In this step the coading is created according to the connections given to the aurduino mega with the pin configurations.

The code:

```
#include<TimerOne.h>
int signal1[] = {23, 25, 27};
int signal2[] = {46, 48, 50};
int signal3[] = {13, 12, 11};
int signal4[] = {10, 9, 8};
int redDelay = 5000;
int yellowDelay = 2000;
volatile int triggerpin1 = 31;
volatile int triggerpin2 = 44;
```

```
volatile int echopin2 = 42;
volatile int triggerpin3 = 7;
volatile int echopin3 = 6;
volatile int triggerpin4 = 5;
volatile int echopin4 = 4;
                              // Variable for storing the time traveled
volatile long time;
volatile int S1, S2, S3, S4;
                                 // Variables for storing the distance
covered
int t = 5; // distance under which it will look for vehicles.
void setup(){
 Serial.begin(115200);
 Timer1.initialize(100000); //Begin using the timer. This function must be
called first. "microseconds" is the period of time the timer takes.
 Timer1.attachInterrupt(softInterr); //Run a function each time the timer
period finishes.
 // Declaring LED pins as output
 for(int i=0; i<3; i++){
  pinMode(signal1[i], OUTPUT);
  pinMode(signal2[i], OUTPUT);
  pinMode(signal3[i], OUTPUT);
  pinMode(signal4[i], OUTPUT);
 }
 // Declaring ultrasonic sensor pins as output
 pinMode(triggerpin1, OUTPUT);
 pinMode(echopin1, INPUT);
 pinMode(triggerpin2, OUTPUT);
 pinMode(echopin2, INPUT);
 pinMode(triggerpin3, OUTPUT);
```

```
pinMode(echopin3, INPUT);
 pinMode(triggerpin4, OUTPUT);
 pinMode(echopin4, INPUT);
}
void loop()
{
 // If there are vehicles at signal 1
 if(S1<t)
 {
  signal1Function();
 // If there are vehicles at signal 2
 if(S2<t)
  signal2Function();
 // If there are vehicles at signal 3
 if(S3<t)
  signal3Function();
 }
 // If there are vehicles at signal 4
```

```
if(S4<t)
  signal4Function();
}
}
// This is interrupt function and it will run each time the timer period
finishes. The timer period is set at 100 milli seconds.
void softInterr()
{
 // Reading from first ultrasonic sensor
 digitalWrite(triggerpin1, LOW);
 delayMicroseconds(2);
 digitalWrite(triggerpin1, HIGH);
 delayMicroseconds(10);
 digitalWrite(triggerpin1, LOW);
 time = pulseIn(echopin1, HIGH);
 S1= time*0.034/2;
 // Reading from second ultrasonic sensor
 digitalWrite(triggerpin2, LOW);
 delayMicroseconds(2);
 digitalWrite(triggerpin2, HIGH);
 delayMicroseconds(10);
 digitalWrite(triggerpin2, LOW);
 time = pulseIn(echopin2, HIGH);
```

```
S2= time*0.034/2;
 // Reading from third ultrasonic sensor
 digitalWrite(triggerpin3, LOW);
 delayMicroseconds(2);
 digitalWrite(triggerpin3, HIGH);
 delayMicroseconds(10);
 digitalWrite(triggerpin3, LOW);
 time = pulseIn(echopin3, HIGH);
 S3= time*0.034/2;
 // Reading from fourth ultrasonic sensor
 digitalWrite(triggerpin4, LOW);
 delayMicroseconds(2);
 digitalWrite(triggerpin4, HIGH);
 delayMicroseconds(10);
 digitalWrite(triggerpin4, LOW);
 time = pulseIn(echopin4, HIGH);
 S4 = time*0.034/2;
 // Print distance values on serial monitor for debugging
 Serial.print("S1: ");
 Serial.print(S1);
 Serial.print(" S2: ");
 Serial.print(S2);
 Serial.print(" S3: ");
 Serial.print(S3);
 Serial.print(" S4: ");
 Serial.println(S4);
}
```

```
void signal1Function()
{
 Serial.println("1");
 low();
 // Make RED LED LOW and make Green HIGH for 5 seconds
 digitalWrite(signal1[0], LOW);
 digitalWrite(signal1[2], HIGH);
 delay(redDelay);
 // if there are vehicels at other signals
 if(S2<t || S3<t || S4<t)
 {
  // Make Green LED LOW and make yellow LED HIGH for 2 seconds
  digitalWrite(signal1[2], LOW);
  digitalWrite(signal1[1], HIGH);
  delay(yellowDelay);
 }
void signal2Function()
{
 Serial.println("2");
 low();
 digitalWrite(signal2[0], LOW);
 digitalWrite(signal2[2], HIGH);
 delay(redDelay);
 if(S1<t || S3<t || S4<t)
 {
```

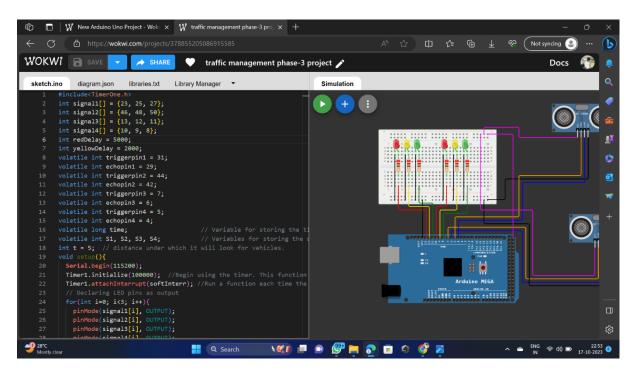

```
digitalWrite(signal2[2], LOW);
  digitalWrite(signal2[1], HIGH);
  delay(yellowDelay);
 }
}
void signal3Function()
{
 Serial.println("3");
 low();
 digitalWrite(signal3[0], LOW);
 digitalWrite(signal3[2], HIGH);
 delay(redDelay);
 if(S1<t || S2<t || S4<t)
 {
  digitalWrite(signal3[2], LOW);
  digitalWrite(signal3[1], HIGH);
  delay(yellowDelay);
 }
}
void signal4Function()
{
 Serial.println("4");
 low();
 digitalWrite(signal4[0], LOW);
 digitalWrite(signal4[2], HIGH);
 delay(redDelay);
 if(S1<t || S2<t || S3<t)
```

```
{
  digitalWrite(signal4[2], LOW);
  digitalWrite(signal4[1], HIGH);
  delay(yellowDelay);
 }
}
// Function to make all LED's LOW except RED one's.
void low()
{
 for(int i=1; i<3; i++)
 {
  digitalWrite(signal1[i], LOW);
  digitalWrite(signal2[i], LOW);
  digitalWrite(signal3[i], LOW);
  digitalWrite(signal4[i], LOW);
 for(int i=0; i<1; i++)
 {
  digitalWrite(signal1[i], HIGH);
  digitalWrite(signal2[i], HIGH);
  digitalWrite(signal3[i], HIGH);
  digitalWrite(signal4[i], HIGH);
}
```

Then the code is created the simulation is ready to perform.

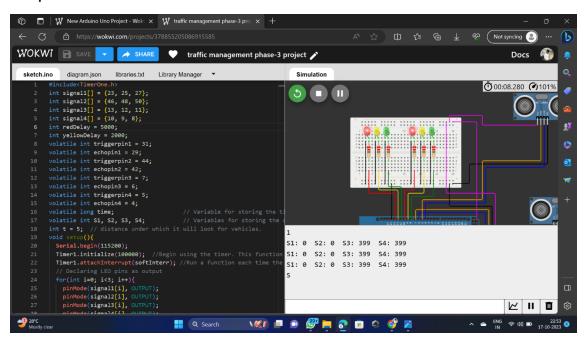

Step6:

In this step the simulaation is executed by cliking the run button

Then the last step is output progress for our system.

Step7:

Here the simulation is implemented successfully without any errors and simulation issues.
